

WHAT IS CLAIMED IS:

1. A kit adapted for manual insertion in and removable from a vertical paint can having an open top end and containing paint, said kit comprising:

a vertical hollow tapered cylinder open at upper and lower ends, the lower end being adapted for removable engagement with the open top end of the paint can, the upper end of the cylinder being larger than the lower end of the cylinder and larger than the open top end of the can, the upper end of the cylinder having a spout adapted to pour paint; and
a lid in detachable engagement with the upper end of the cylinder and covering the spout.

2. The kit of claim 1 further including manually operative paint stirring means securable within the cylinder and extending therebelow.

3. The kit of claim 2 wherein the means includes a horizontal elongated member disposed between the upper and lower ends of the cylinder and secured to opposite inner walls of the cylinder and extending diametrically therebetween.

4. The kit of claim 3 wherein said member has a centrally disposed first hole and said means includes a vertically elongated rod extendable through said hole, said rod having a lower end extending below the cylinder and terminating in paint stirring paddles, said rod having an upper end extending above the member and below the upper end of the cylinder, and a detachable handle which detachably engages the upper end of the rod and when manually rotated rotates the rod and mixes the paint

5. The kit of claim 4 wherein the handle may be detached from the upper end of the rod, turned upside down and reattached to the upper end of the rod so that it no longer extends above the top of the upper end of the cylinder and the detachable cylinder cover may be attached for secure air tight paint storage.

6. the kit of claim 5 wherein the spout in the upper end of the cylinder is shaped to facilitate neat and clean pouring of paint.

7. The kit of claim 6 wherein a paint brush carrying excess paint can be wiped off using the horizontally elongated member.
